

Maket Lakay demo guide

A presentation-ready walkthrough for the customer marketplace, vendor dashboard, support workflow, and admin operations.

Frontend-only prototype

All flows use local mock data and localStorage. No database, backend, auth service, or real payment provider is connected.

Multi-role simulation

The account menu switches between customer, vendor, support staff, and admin for live demos.

Operational workflows

Cart, checkout, orders, tracking, refunds, disputes, evidence, payouts, and notifications are connected.

Ready for backend later

The UI is structured around services and typed data so real APIs can replace mock data in a future phase.

Area	Status
Customer marketplace	Ready
Vendor dashboard	Ready
Support workflow	Ready
Admin operations	Ready
Backend integrations	Future phase

Best first demo path

This is the recommended live walkthrough. It tells one complete story from shopping to dispute handling and admin review.

Step	What to show	Route
1	Homepage and product discovery	/
2	Product details, cart, checkout, and order tracking	/products/[slug] -> /cart -> /checkout -> /orders/ML-1024/tracking
3	Customer support ticket and photo evidence	/support
4	Vendor dispute response and vendor photo evidence	/vendor/disputes
5	Support queue, SLA, refund approval, and escalation	/admin/support
6	Admin escalation, payouts, analytics, and customer notification	/admin/escalations -> /admin/payouts -> /account/notifications

Live demo reset

Primary app link	http://localhost:3000/demo
Reset action	Use the Reset demo data button on /demo to clear local browser demo state before presenting.
Integration note	No real backend, database, auth service, API, payment provider, or delivery service is connected.

Role-based route map

Use the account/profile menu in the app header to switch roles during the presentation. Keep this page nearby as the live demo checklist.

Customer journey	Route
Shop marketplace	/
Product discovery	/products
Cart	/cart
Checkout	/checkout
Track order	/orders/ML-1024/tracking
Support portal	/support
Notifications	/account/notifications

Vendor journey	Route
Apply to sell	/sell
Dashboard	/vendor
Products	/vendor/products
Inventory	/vendor/inventory
Orders	/vendor/orders
Disputes and evidence	/vendor/disputes
Payout requests	/vendor/payout-requests
Store settings	/vendor/settings

Support journey	Route
Support queue	/admin/support
Admin escalation review	/admin/escalations
Customer support portal	/support
Customer notifications	/account/notifications

Admin journey	Route
Admin overview	/admin
Vendor approvals	/admin/vendors
Product moderation	/admin/products
Orders	/admin/orders
Commissions	/admin/commissions
Payout review	/admin/payouts
Reports and analytics	/admin/analytics

Presenter checklist

Moment	Talking point
Open with the story	Maket Lakay helps customers in Haiti and the diaspora shop from trusted Haitian vendors.
Show customer commerce	Search, category navigation, product cards, product details, cart, checkout, order confirmation, and tracking.
Show customer support	Open a support ticket, attach photo evidence to a dispute, and show customer notifications.
Switch to vendor	Review dashboard metrics, catalog tools, orders, payouts, store settings, and dispute evidence with photo upload.
Switch to support staff	Assign tickets, reply to customers, monitor SLA state, approve refunds, and escalate to admin.
Switch to admin	Approve vendors, moderate products, manage orders, review payouts, configure commissions, and close escalations.
Close with roadmap	Explain that the app is frontend-only today and ready for backend, authentication, payment, delivery, and database integration later.

What to say if asked about data

This build is intentionally frontend-only. It proves UX, role flows, information architecture, state behavior, and operational screens before connecting real services.
